THE CHALLENGEERS

Abacus

SPORT

The Abacus range offers modern design and high flexibility with minimum maintenance and extraordinary performance at sports venues which was recognised by the design industry with the prestigious FX Award in Public, Leisure or Workplace Furniture category.

DESIGNER:
REBECCA STEWART
STUDIO: **ARUP**

A foldable stadium seat made of injected polypropylene. The ergonomically shaped backrest along with the seat are fixed to an aluminum beam mounting. The seat rotates around the beam itself, automatically folding up by counterweight when not in use. It reduces the number of components, thus significantly speeds up assembly time at the venue.

Abacus assembly is quick and easy. Both the backrest and the seat are fixed directly to the beam mounting considerably reducing the number of components. Additional accessories such as armrests and cupholders are also attached to the beam.

Abacus Bronze

The seat and backrest are made of through-dyed polypropylene, thanks to which the colours are more intensive and do not fade in different weather conditions. This applies to the whole range of available colours and has been confirmed by tests.

Abacus Silver

The Abacus Silver chair has all the advantages of the basic model. Additionally, to increase the user's comfort, both the backrest and seat have been equipped with upholstered pads filled with foam.

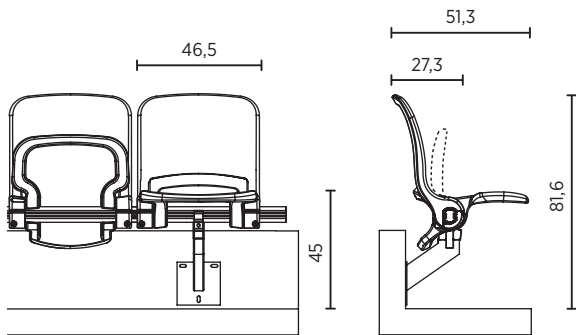

Abacus Gold

This model has been designed to meet the needs of the most demanding users. The seat and the backrest have special covers made of weather-resistant leatherette and filled with a thick foam layer to increase user's comfort. It can be equipped with a two-stage ventilation system, which channels air through the perforated upholstery.

Omega

SPORT

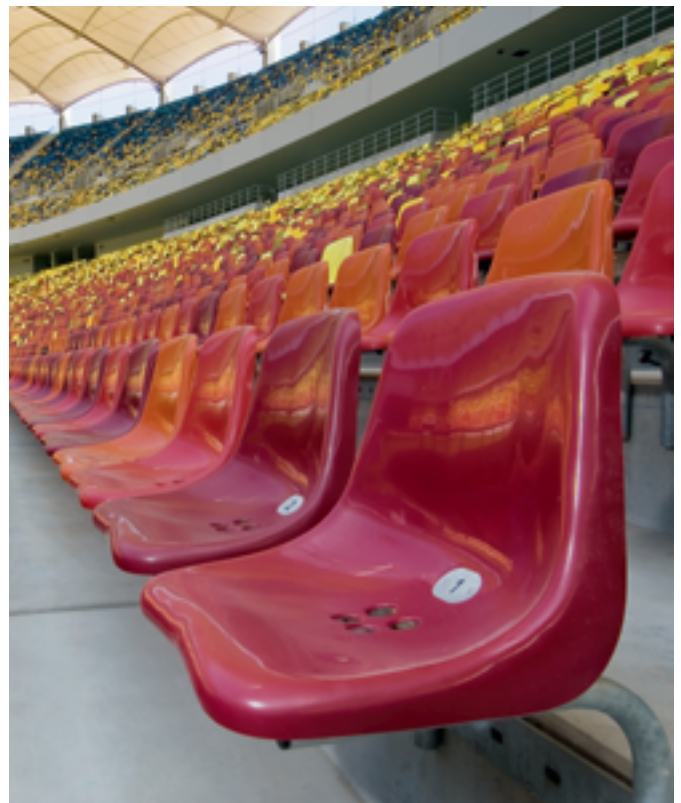

The Omega line comprises shell-type stadium seats characterised by high durability parameters and great weather resistance. Thanks to their classic look, the chairs are a perfect choice not only for stadiums and entertainment areas but also other sports facilities.

The seat is made of polyamide or polypropylene – materials that have excellent mechanical and physicochemical properties – and its supporting structure is made of corrosion-proof steel. The durability is increased by its strengthened edges.

Omega performs well in both indoor and outdoor facilities. In the latter, the additional advantages of the chair are drainage holes, which let rain and damp flow down the surface, leaving the seat clean and dry. Omega is suitable for various types of assembly, so it can be adjusted to almost every sports arena. This shell-type stadium seat combines practical and aesthetic qualities with high durability parameters.

Moreover, Omega HB conforms to the guidelines and requirements of FIFA, UEFA and the Polish Football Association.
